

# Health Information Technology

The Health Information Technology program prepares students to provide data that drives the healthcare industry. Health Information Technicians use information protection standards while using, analyzing, storing, retrieving, and presenting data for the use of reimbursement, research, support of departmental operations, and clinical and business decisions in healthcare settings.

**NEOSHO COUNTY  
COMMUNITY COLLEGE**

## Program Outcomes

Health Information Technology students will earn an Associate of Applied Science (AAS) degree in preparation to sit for the nationally-recognized Registered Health Information Technician (RHIT) exam. Students will learn the knowledge and skills necessary to analyze, present, abstract, code, store, and retrieve data for the support of business, clinical, and departmental decisions in healthcare or related organizations.

## Benefits
